

## GUEST EDITORS' NOTE

This is a thematic volume which has developed from presentations given at the Debrecen Workshop on Argument Structure (WAS), which was held at the Department of English Linguistics at the University of Debrecen in May 2012. Having seen the success of WAS, we decided to explore ways to provide the presenters with an opportunity to publish their talks developed into papers in a peer-reviewed journal. In the spring of 2013, *Acta Linguistica Hungarica* accepted our proposal for two special volumes. The first volume, which contained papers on datives, and which was edited by our colleague, György Rákosi, was published in March 2014.

The papers in this second volume all revolve around argument structure and event structure phenomena in a variety of languages: Dutch, English, Hungarian, Pazar Laz and Udmurt. The authors provide fresh perspectives on and offer novel data for several issues that are in the forefront of current linguistic investigation, and thus they can be of interest to linguists with various theoretical persuasions.

In their paper *How many theta roles in a reflexive verb?*, Alexis Dimitriadis and Martin Everaert discuss reflexive verbs and argue for their being syntactically intransitive but semantically two-place predicates. In *Transitivity in Pazar Laz*, Eser Erguvanli Taylan and Balkiz Öztürk present arguments for the claim that all verbs in Pazar Laz have a transitive syntactic structure. In *Towards an analysis of the causative/non-causative alternation in Udmurt*, Orsolya Tánzos contributes to the discussion on the causative alternation by offering new empirical evidence for a non-derivational analysis. The paper *The argument structure of Old Hungarian -t gerunds* is exceptional in the sense that it is not based on a WAS presentation. It has been included because it fits into this volume thematically. In this paper, Éva Dékány develops a “mixed projection” analysis of a special gerundive construction.

We are indebted to our reviewers for their substantial contribution to putting together this volume: Gábor Alberti (University of Pécs), Alex Alsina (Universitat Pompeu Fabra), Berit Gehrke (Université Paris Diderot), Gianina Iordăchioaia (University of Stuttgart), Andrew Koontz-Garboden (The University of Manchester), Gergely Pethő (University of

Debrecen), E. Phoevos Panagiotidis (University of Cyprus), Christopher Piñón (Université Lille 3), György Rákosi (University of Debrecen) and Peter Sells (University of York). We also wish to extend our thanks to Ferenc Kiefer and Katalin É. Kiss, the editors of *Acta Linguistica Hungarica*, for providing us with the opportunity to guest edit this special volume and to Zoltán G. Kiss for technical editing. We truly hope that these papers will be informative, inspiring and thought-provoking in a variety of areas.
