

45 Manuscripts should be submitted to the Editorial Office of AGROKÉMIA és
46 TALAJTAN at <https://submit.akademiai.com/agrokemia/index.php/agrokemia>
47 [click on **SUBMISSIONS** tab, register or log in and follow the instructions in the OJS
48 online editorial system].

49 Papers shall be written in concise English. Contributors who are not native
50 English speakers are advised to get their manuscript checked by a native English-
51 speaking colleague prior to submission. Papers – including a short summary, tables,
52 figures and list of references – should not exceed 8 pages for short communication,
53 18 pages for original paper and 20 pages for review (Margins: for A/4 page format
54 use 5 cm upper, 5.5 cm lower, 4 cm left, 4.5 cm right; single space; Font type: Times
55 New Roman; Text 10.5 pt, tables and figure captions 9.5 pt). Lines should be
56 numbered to facilitate the review process.

57 In the text, refer to the *list of references* with the first author's NAME included
58 within or after the sentence, followed by the year of publication in brackets. For
59 example: ALLEN et al. (1998) stated... or after the sentence: (ALLEN et al., 1998). If
60 several articles published by the same author in the same year are cited, these should
61 be distinguished by lower-case letters written after the year.

62 **Materials and methods**

63
64
65 For the sake of uniformity, papers of type a) in Introduction should, as far as
66 possible, conform to the following outline:

- 67 a) Abstract/Summary;
- 68 b) Introduction (grounds for the research, brief survey of literature);
- 69 c) Materials and methods;
- 70 d) Results;
- 71 e) Discussion and conclusions.

72
73 The construction of papers of type b) – h) listed in the Introduction will depend
74 on the subject matter. When describing the test methods, make sure that it is so
75 detailed that the work can be repeated based on it, but do not detail methods that can
76 also be referred.

77 **Results**

78
79
80 The number of tables and figures is maximized in the necessary amount to
81 evaluate and understand the test results. There should be no overlap between their
82 data. Please insert them at the end of the manuscript (in the case of a large size, submit
83 them in a separate file), provide them with a serial number and title, and refer to them
84 in the text (*Table 1; Figure 1*) in consecutive order. At the final layout, they will be
85 placed in the correct position. Please indicate the dimensions accurately. Avoid
86 overloading the tables, so only the most important data should included. Please limit
87 the numbers after the decimal point.

88 Diagrams, photographs and drawings must be referred to as "figure" and
89 numbered consecutively. Attention must be paid to the quality of the photographs

90 (sharpness, contrast), as well as to the clarity, accuracy and careful execution of the
91 drawings. It is advisable to contain as little text as possible, therefore the main parts
92 of figures are marked with capital letters, and within a figure (e.g. to distinguish
93 individual curves) lowercase letters should be used. The explanation of the signs used
94 should be included in the figure caption. The width of the tables and figures to be
95 published must not exceed 12.5 cm.

96

97

Discussion

98

99

100

101

102

103

104

105

106

107

The results should not be repeated again in this section. When discussing the results, results should be contrasted with the results of similar studies found in the literature. Pay attention to ensure balance, to compare results that may be contradictory to each other, and do not unilaterally omit findings or conclusions that are inconsistent with the results of the thesis. In this chapter, avoid making assumptions and speculations that are not sufficiently substantiated as findings. The discussion of the results can be merged with the "Results" section if it is easier to manage.

108

Conclusion

109

110

111

112

In the conclusions, answers to the basic research question should be summarized, highlighting the most important findings and uncertainties, even supplementing these with suggestions for the further direction of the research.

113

114

115

116

117

118

119

120

121

122

The manuscript submission system allows for single blind review, i.e. the author(s) do not know the identity of the reviewers. When submitting the manuscript, the author(s) may propose reviewers, who should in any case be recognized scientist in the subject of the manuscript and independent of the author(s). The reviewing process of the submitted manuscript is coordinated, after plagiarism check, by the relevant Section Editor. The publication of the submitted manuscripts is proposed by the section editor based on the opinion of at least two reviewers. In case of dissenting opinions, the section editor calls for additional reviewer(s). The Editor-in-Chief decides on the acceptance of the submitted manuscripts based on the suggestion of the Section Editor after the opinion of reviewers (minimum two).

123

124

125

126

127

128

129

The authors receive feedback from the reviewer in the form of a review sheet. Reviewers can make corrections in the submitted article, if necessary. Authors should indicate the corrections of errors, deficiencies or other remarks in a traceable manner (e.g. turning on Review/Track changes, or highlighting the corrected pieces of text). Regardless of the corrections made in the article, authors should **respond to the opinion of the reviewers in a separate file**. Failing to do this will lead to automatic rejection of the manuscript.

130

131

132

133

The author(s) will receive a PDF proof of the final-form articles to be published. Please send it back with your corrections to the Editorial Office within 72 hours. After the Publisher finalized the corrections, the article will be published online within a few days.

134 The authors are responsible for the content of the papers. By submitting the
135 manuscript, the author(s) will automatically declare that they have read and accepted
136 the [Ethical Guidelines](#) of the Publisher, Akadémiai Kiadó.

137 Upon acceptance of manuscripts, Authors will receive a license agreement valid
138 at the time of acceptance, the current versions of which are available on the following
139 pages:

140 - [Declaration of the author](#) entitled to publish Open Access under the [agreement](#)
141 [of EISZ and Akadémiai Kiadó](#).

142 - [Copyright Transfer Statement \(Green Open Access\)](#)

143 - [Optional Open Access](#)

144

145

146 Your questions and possible problems may be reported to the editorial board /
147 editors: (editorial.agrokemia@atk.hu), for further information see the Publisher's
148 instructions (<https://akjournals.com/page/authors>).

149

150

Acknowledgement

151

152 The research was funded by XYZ. Additional persons can be listed who helped
153 with the implementation of the work in a non-co-author capacity. Pay attention to the
154 accuracy of the data, since after publication, corrections are only possible in
155 corrigendum.

156

157

References

158

159 *A list of references* should be included at the end of the paper, in alphabetical order
160 of all AUTHOR(S) or EDITOR(S) (avoid the use of *et al.*). References to non-peer reviewed
161 or non scientific publications and internet resources should be avoided. When compiling
162 the list of references, the following guidelines should be adhered to:

163

164 a) In the case of *papers appearing in journals*, the name(s) of the AUTHOR(S), the year
165 of publication, the title of the paper, the name of the journal, the volume number (in
166 **bold**), in certain cases the issue number (in brackets) and the first and last page
167 numbers of the paper must be included.
