Template and Information for Authors

The content of this guide contains information on the submission of manuscripts and the review and communication process. At the same time, its format and structure follow the format and structure of the manuscripts.

Title

1*Given name(s) SURNAME of Author, 2 Given name(s) SURNAME of Author, 3Given name(s) SURNAME of Author

1Affiliation, City, Country; 2Affiliation, City, Country; 3Affiliation, City, Country

The title of the paper should be short but expressive and should be followed by the name(s) of the author(s) and affiliation(s) (including the department) where the work was carried out.

*Corresponding author: CORRESPONDING AUTHOR’S NAME, Affiliation and detailed postal address.

E-mail: corresponding author’s e-mail address

Abstract

In the case of original research papers a concise abstract must be included, which is clearly comprehensible in itself. The length depends on the subject of the paper, but the text should not exceed one page; it should contain a brief summary of the aims, materials and methods of the studies and the conclusions drawn from the results achieved. After the Abstract, please specify maximum 5 keywords.

Keywords: keyword 01, keyword 02, keyword 03, keyword 04, keyword 05

Introduction

Contributions to AGROKÉMIA és TALAJTAN may be:

a) Papers concerning original research results or methodology;
b) Short communications;
c) Comprehensive reviews on current topics in a particular field of science;
d) Opinion or Discussion paper;
e) Summaries about Academic Meetings;
f) Reports on international or domestic scientific events or anniversaries;
g) Information on foreign scientific organizations and international relations in any particular field;
h) Book reviews.
Manuscripts should be submitted to the Editorial Office of AGROKÉMIA és TALAJTAN at https://submit.akademiai.com/agrokemia/index.php/agrokemia [click on SUBMISSIONS tab, register or log in and follow the instructions in the OJS online editorial system].

Papers shall be written in concise English. Contributors who are not native English speakers are advised to get their manuscript checked by a native English-speaking colleague prior to submission. Papers – including a short summary, tables, figures and list of references – should not exceed 8 pages for short communication, 18 pages for original paper and 20 pages for review (Margins: for A/4 page format use 5 cm upper, 5.5 cm lower, 4 cm left, 4.5 cm right; single space; Font type: Times New Roman; Text 10.5 pt, tables and figure captions 9.5 pt). Lines should be numbered to facilitate the review process.

In the text, refer to the list of references with the first author's NAME included within or after the sentence, followed by the year of publication in brackets. For example: ALLEN et al. (1998) stated… or after the sentence: (ALLEN et al., 1998). If several articles published by the same author in the same year are cited, these should be distinguished by lower-case letters written after the year.

Materials and methods

For the sake of uniformity, papers of type a) in Introduction should, as far as possible, conform to the following outline:

a) Abstract/Summary;
b) Introduction (grounds for the research, brief survey of literature);
c) Materials and methods;
d) Results;
e) Discussion and conclusions.

The construction of papers of type b) – h) listed in the Introduction will depend on the subject matter. When describing the test methods, make sure that it is so detailed that the work can be repeated based on it, but do not detail methods that can also be referred.

Results

The number of tables and figures is maximized in the necessary amount to evaluate and understand the test results. There should be no overlap between their data. Please insert them at the end of the manuscript (in the case of a large size, submit them in a separate file), provide them with a serial number and title, and refer to them in the text (Table 1; Figure 1) in consecutive order. At the final layout, they will be placed in the correct position. Please indicate the dimensions accurately. Avoid overloading the tables, so only the most important data should included. Please limit the numbers after the decimal point.

Diagrams, photographs and drawings must be referred to as "figure" and numbered consecutively. Attention must be paid to the quality of the photographs.
(sharpness, contrast), as well as to the clarity, accuracy and careful execution of the drawings. It is advisable to contain as little text as possible, therefore the main parts of figures are marked with capital letters, and within a figure (e.g. to distinguish individual curves) lowercase letters should be used. The explanation of the signs used should be included in the figure caption. The width of the tables and figures to be published must not exceed 12.5 cm.

**Discussion**

The results should not be repeated again in this section. When discussing the results, results should be contrasted with the results of similar studies found in the literature. Pay attention to ensure balance, to compare results that may be contradictory to each other, and do not unilaterally omit findings or conclusions that are inconsistent with the results of the thesis. In this chapter, avoid making assumptions and speculations that are not sufficiently substantiated as findings. The discussion of the results can be merged with the "Results" section if it is easier to manage.

**Conclusion**

In the conclusions, answers to the basic research question should be summarized, highlighting the most important findings and uncertainties, even supplementing these with suggestions for the further direction of the research.

The manuscript submission system allows for single blind review, i.e. the author(s) do not know the identity of the reviewers. When submitting the manuscript, the author(s) may propose reviewers, who should in any case be recognized scientist in the subject of the manuscript and independent of the author(s). The reviewing process of the submitted manuscript is coordinated, after plagiarism check, by the relevant Section Editor. The publication of the submitted manuscripts is proposed by the section editor based on the opinion of at least two reviewers. In case of dissenting opinions, the section editor calls for additional reviewer(s). The Editor-in-Chief decides on the acceptance of the submitted manuscripts based on the suggestion of the Section Editor after the opinion of reviewers (minimum two).

The authors receive feedback from the reviewer in the form of a review sheet. Reviewers can make corrections in the submitted article, if necessary. Authors should indicate the corrections of errors, deficiencies or other remarks in a traceable manner (e.g. turning on Review/Track changes, or highlighting the corrected pieces of text). Regardless of the corrections made in the article, authors should respond to the opinion of the reviewers in a separate file. Failing to do this will lead to automatic rejection of the manuscript.

The author(s) will receive a PDF proof of the final-form articles to be published. Please send it back with your corrections to the Editorial Office within 72 hours. After the Publisher finalized the corrections, the article will be published online within a few days.
The authors are responsible for the content of the papers. By submitting the manuscript, the author(s) will automatically declare that they have read and accepted the Ethical Guidelines of the Publisher, Akadémiai Kiadó.

Upon acceptance of manuscripts, Authors will receive a license agreement valid at the time of acceptance, the current versions of which are available on the following pages:

- Declaration of the author entitled to publish Open Access under the agreement of EISZ and Akadémiai Kiadó.
- Copyright Transfer Statement (Green Open Access)
- Optional Open Access

Your questions and possible problems may be reported to the editorial board/editors: (editorial.agrokemia@atk.hu), for further information see the Publisher’s instructions (https://akjournals.com/page/authors).

Acknowledgement

The research was funded by XYZ. Additional persons can be listed who helped with the implementation of the work in a non-co-author capacity. Pay attention to the accuracy of the data, since after publication, corrections are only possible in corrigendum.

References

A list of references should be included at the end of the paper, in alphabetical order of all AUTHOR(S) or EDITOR(S) (avoid the use of et al.). References to non-peer reviewed or non scientific publications and internet resources should be avoided. When compiling the list of references, the following guidelines should be adhered to:

a) In the case of papers appearing in journals, the name(s) of the AUTHOR(S), the year of publication, the title of the paper, the name of the journal, the volume number (in bold), in certain cases the issue number (in brackets) and the first and last page numbers of the paper must be included.

b) In the case of books, the reference should include the name(s) of the AUTHOR(s) or EDITOR(s), the year of publication, the title of the book, the publisher and the place of publication.

LAL, R., KIMBLE, J.M., ESWARAN, H., STEWART, B.A. (eds.), Global Climate Change and Pedogenic Carbonates. CRC/Lewis, Boca Raton, FL.

d) When it is necessary use the URL of referenced Internet sources with the latest date of access in brackets (11.12.2022)
e) Verbal communications need not be listed, while in the case of manuscripts, only the AUTHOR(s), the year and the title need be designated.
